

# Good Water for all

## What is Good Water?

Millions of people still lack safe drinking water. A Good Water project is a way for your company or organization to make a difference. By sponsoring a Good Water project, you provide safe drinking water to a school, hospital or perhaps a whole village in a developing country. Good Water projects employ SolarWave – a reliable, environmentally friendly and cost-effective Swedish water purification technology.

## How does it work?

Good Water is not only about installing the equipment. We start every project with an awareness raising campaign on the importance of drinking safe water which we conduct together with local community leaders and NGOs. We then install a SolarWave water purification system and train local technicians in its proper operation and maintenance. We periodically conduct follow-up awareness campaigns and trainings and provide spare parts and technical support throughout the project's entire lifespan. We monitor the project's impacts on the community and we report back to you.

## The Good Water project in Tanzania in partnership with Midroc

Midroc Europe is a group of companies operating in the fields of properties, construction, industry and environmental technology. Since October 2013 Midroc sponsors a Good Water project in Tanzania. Thanks to the project, SolarWave water purification systems are now installed in two schools and in one health clinic in the Morogoro region and 10,000 people have gained access to safe drinking water.

# A win-win partnership

By becoming our partner in a Good Water project you bring positive change to both local communities and to your organization.

## How do local communities benefit?

**Safe drinking water** which is a basic human need and a precondition for success in the fight against poverty and hunger.

**Improved health.** One of the main health benefits of drinking safe water is the reduced risk of waterborne diseases. Reduced use of indoor smoky fires for boiling water also prevents burns and lung diseases.

**Money and time savings** due to reduced reliance on firewood and charcoal for boiling water. Improved health means also that less money from the family budget is spent on medical care.

**Improved school performance and increased family earnings** due to improved health.

## What do you get as a corporate partner?

**Measurable and easy-to-communicate results of your involvement.** We will be monitoring and reporting to you the amount of water purified and the impacts of the project on the community.

**Improved corporate image.** Giving back to the community helps you getting loyal customers and attract better talent.

**Carbon emissions offsets.** Each SolarWave unit in a Good water project reduces 444 tCO<sub>2</sub> per year by eliminating the need to boil water.

**Collaborative and inspired team.** By fundraising for a Good Water project as a team you will create a sense of shared purpose within your employees.
